Section – A

Marks:20

**Q1. Read the passage and answer the questions that follow.**

**(10)**

Many animals and birds can tell us what the weather will be. They can sometimes tell more than this. A geologist, who studies about rocks, had a very ordinary sheep dog. Once he was sitting at his desk, late in the evening. His baby daughter was sleeping nearby, in a pram, and the dog was dozing in the corner. All was peaceful and quiet. Suddenly the dog leapt up, took the baby by her night dress, pulled her out of the pram and dived towards the door. The geologist was terrified. He thought the dog had gone mad. He snatched up his rifle and rushed from the house. Just then the earth shook and the house collapsed. An earthquake had started. The dog had saved the whole family. Animals and birds can feel it when an underground storm is approaching. People may not notice if somewhere far off there is a slight shaking. But dogs, snakes, lizards and fish get excited. They know that something terrible is going to happen.

A common opinion is that animals can detect certain events, like earthquakes, as soon as they happen, even if the originating event is a great distance away. While this ability wouldn't make much of a difference to people at the scene of the disaster, it could conceivably assist those located farther from the epicenter. A few researchers even believe animals may be able to sense the precursors to these events before they actually strike. However, hard evidence of this is extremely limited; most of the evidence is anecdotal (unreliable).

A. What was the geologist doing late in the evening? (1)

B. What did the geologist think about the dog ? (1)

C. Correct the following sentences and rewrite them: (2)

- a) The geologist had a baby son.
